VFLO 5.0
5.0 GPM WATER PRESSURE PUMP

Powered by the revolutionary DiMOND technology.

JABSCO's V-FLO variable flow, constant pressure water pumps now feature the revolutionary new DiMOND technology designed to automatically diagnose and monitor all aspects of your pump's performance to prevent system failure. DiMOND incorporates eight specific modules designed to Monitor, Protect and Prevent – allowing you to evaluate and respond to the problem before the pump or your boat are damaged.

The DiMOND technology automatically runs diagnostics to detect common failures such as run dry, plumbing leaks, over current, under current, low voltage and over voltage. If the diagnostic discovers a problem, the pump will stop, identify the root cause, and provide the data you need to solve the problem.

V-FLO is powered by a new variable speed drive that delivers the exact amount of water flow needed to perform a variety of onboard delivery tasks. Since the pump is constantly monitoring water flow and electrical current, it automatically adjusts itself as needed, ensuring that your systems are operating at peak efficiency.

Features and Benefits

- 5.0 gallons per minute (19 liters)
- DiMOND technology provides consistent water pressure
- Up to 50% less power consumption
- Learns the boat's water pressure system to improve pump performance
Specifications
Pump: 4 Chamber Positive displacement diaphragm design. Self-Priming up to 10 feet suction lift. Pump able to run dry without damage. Removable port adapters.

Motor: Permanent magnet, double ball bearing armature.

Kit Includes
- 5.0 Water Pressure Pump
- Pumpgard™ Inline Strainer
- Snap-Fit Port Fittings

Typical Installation Layout

The Difference Between a Pump and a Pumping System
If the pump is the heart of your boat's water system, then Jabsco’s DiMOND technology is the brain. DiMOND technology looks at the water system as a whole and controls the pump accordingly. The underlying philosophy is to monitor the system, protect it from failure, and to prevent any damage.

Monitor
The DiMOND technology continuously monitors system operational status in order to detect common water system problems. Pump failures due to run dry conditions or electrical anomalies are a thing of the past. Plumbing leaks are also a major concern with water systems and the DiMOND technology can detect those as well. With six different diagnostics being monitored, you can be assured your water system is functioning properly.

Protect
When system monitoring detects a problem, DiMOND technology shuts down the pump to safeguard your boat and water system. Diagnostic indicator lights on the on/off switch tell you the source of the problem giving you a head start on trouble shooting and repairing the system.

Prevent
Because problems in the system are recognized quickly, you have time to evaluate and respond before the pump or your boat are damaged. Preventing problems are important, but preventing a critical problem like the complete loss of all potable water can be life saving.

DiMOND Modules
