SeaGuardII DCP

Multiparameter Doppler Current Profiler

SeaGuardII DCP is a scalable, easy to use current profiler. Its flexibility makes it the perfect instrument to address all scenarios of ocean observations and monitoring.

SeaGuardII is a smart data hub that combines the SeaGuard electronics with the advanced management firmware of Aanderaa SmartGuard data hub offering impressive capabilities. Combined with the Doppler Current Sensor, DCPS600, it forms the SeaGuardII DCP.

- Secure data
- Increased deployment time
- Scalable platform
- Intelligent compensation
- Optimal flexibility
- Smart data quality control
- Modem Support

Unique extendable features

- Plug and Play. Add sensors and strings
- Easy connection of AiCAP sensors
- Integration of 3rd party analog and serial sensors
- RS232/RS422 inputs with power control

Profile flexibility

- User selectable broadband and narrowband modes
- Several profiles simultaneously
- Surface referred columns
- Calculates and compensates all data on the fly on-board, no post processing needed
- Advanced autobeam algorithm; automatic selection of the best 3-beams combination to remove faulty cells

Longer deployment time

- 24 months autonomous deployment with 30 minutes sampling
- Reduced power consumption (broadband technology)
- Increased battery capacity; up to 70Ah internal
- Optional user assembled battery

Perfect instrument for buoy and system applications

- Unique motion compensation algorithms for tilt and rotation of every single measurement
- Modem support for direct connection to radio, GPRS, GOES, GSM or Iridium
- Reduced transmission cost
- Store full datasets on SD card and transmit selected data.
- Recording and transmission interval may be scheduled independently
- Automatic retransmission of missing datasets

Additional features

- Available with Acoustic wave
- Double the measuring range with a single instrument; connect to plug and play DCPS sensors
- Measure in the blanking zone combined with a single point current sensor

Real time web based display: Hydrosphere

- Both real time and historical data in graphs
- Data storage and retrieval from included database
- Several stations simultaneously
- Alarms on parameters or missing data

Post processing software: Data Studio

- Efficient data analysis with 2D, 3D graphs
- Cross correlation of different variables
- Data export function

User friendly set up and configuration

- Configuration software for pre-deployment and remote
- Connect via USB, Serial RS-232 / RS-422, remote via modems
- Change sensor setting
- Control recording
- Monitor status of the site

LED indicator

- Visual confirmation of the instrument status

The SeaGuardII DCP

600 kHz Doppler Current Profiler

Buoy

- Lower cost by removing the need for additional logger; SeaGuardII is the system data hub
- Lower transmission cost by intelligent transmission interval settings
- Store full datasets and transmit reduced amount of data
- Direct connection and control of modems; radio, GSM, GPRS, Iridium, AIS, GOES

Mooring line

- Upside down mounting
- Full flexibility of additional parameters on top end plate or distributed in the water column using AiCaP CANbus
- 2 serial inputs with power control
- 4 analog inputs
- Plug and play wave, tide, oxygen, conductivity, temperature and turbidity sensors

Bottom mounted

- Measure closer to the bottom by combining with Aanderaa's single point current sensor
- Refer current cells to the surface to follow water level changes
- Multi column capabilities
- Surface current in top cms layer
- Additional battery capability

SeaGuardII DCP

- User selectable broadband or narrowband modes
- Automatic flagging of bad data
- Multi sensors groups with individual recording intervals
- Same power consumption in burst and spread mode when measuring currents
- Advanced tilt compensation for each ping to achieve highest quality current measurements

Remote control and sensor status monitoring of equipment in the field

Provide accurate real-time data from our own **DB1750 Buoy platform**. Combining sensors from the Aanderaa Ocean Waves, Ocean Currents, and Water Quality product lines with the **AADI Real-Time Communication system** provide you with a versatile solution for measuring Hydrological, Meteorological, and Water Quality parameters all from a single platform.

Xylem |'zīləm|

- 1) The tissue in plants that brings water upward from the roots;
- 2) a leading global water technology company.

We're a global team unified in a common purpose: creating advanced technology solutions to the world's water challenges. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. Our products and services move, treat, analyze, monitor and return water to the environment, in public utility, industrial, residential and commercial building services settings. Xylem also provides a leading portfolio of smart metering, network technologies and advanced analytics solutions for water, electric and gas utilities. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise with a strong focus on developing comprehensive, sustainable solutions.
