Well Depth Indicator Probe Instructions

Item

Detachable Link
Well Depth Indicator Probe

Part Numbers

1412
1502

Step 1:

Remove the **Water Level Meter Probe** from the Detachable Link and replace with the **Well Depth Indicator Probe**. Make sure the connection is tight (do not over tighten).

Step 2:

While the **dipper-T** is in water level meter mode, lower the probe down the side of the casing (use the tape guide to protect the tape from sharp edges). When the **Well Depth Indicator Probe** reaches the bottom of the well, the pressure sensitive plunger enters the probe body closing a switch, initiating an audible and visual signal at the top of the well. The well depth reading is taken directly from the tape. *Note: The datum point indicator is on the back of the probe holder.*

For general care, equipment checks, cleaning and warranty information please refer to the **dipper-T Water Level Meter with drawDown Operating and Maintenance Instructions** or visit our website www.heroninstruments.com.

Warranty is conditional upon adherence to these guidelines.
